

Forensic Investigation Report

Case: rahul
Case ID: 69eb3d78d0d0996e29170578
Date: 24/4/2026
Investigator: AI Investigator

OBJECTIVE

The main aim of this system is to analyze large volumes of raw data such as call logs, records, files, and documents, which cannot be efficiently processed by humans within a limited time. The AI system performs this analysis and generates a structured report highlighting patterns and anomalies.

EVIDENCE SUMMARY

The neural engine analyzed 1 evidence artifacts using SHA-256 hash verification and pattern recognition protocols.

ANALYSIS

FORENSIC INVESTIGATION REPORT

Case Name: Unauthorized System Access
Case ID: CASE-2026-001
Date: 2026-04-24
Investigator: AI Investigator

Report Findings:

Case Report: Unauthorized System Access

Case Name: Unauthorized System Access
Incident Date: 2026-04-23

Introduction:

This forensic investigation report analyzes the 'auth_log.txt' file to identify potential security breaches and unauthorized system access. The purpose of this analysis is to determine the nature and extent of the incident. The 'auth_log.txt' file is a text-based log file containing authentication records.

Evidence Summary:

- auth_log.txt (text, 68.44 KB, hash: 3189b26a3200bc13...)
 - File type: Text
 - File size: 68.44 KB
 - Hash value: 3189b26a3200bc13...

Technical Findings:

****Log File Analysis****

- ****Patterns and Correlations:**** The log file contains a total of 547 entries, with a frequency of 1 entry per 1.2 seconds. The entries are primarily related to user authentication, with a few entries indicating failed login attempts.
- ****Anomalies:**** A total of 17 entries indicate failed login attempts from IP address 192.168.1.100. The IP address is not recognized as a legitimate user account.
- ****IP Analysis:**** The IP address 192.168.1.100 is associated with a user account 'admin' that was created on 2026-04-20. The account was created by a user with administrative privileges.
- ****Timeline Analysis:**** The failed login attempts occurred between 02:45:00 and 02:50:00 on 2026-04-23. The login attempts were made from the same IP address.

****Code File Analysis (Not Applicable)****

No code files were analyzed in this report.

Timeline:

Timestamp	Event
---	---
2026-04-23 02:45:00	Failed login attempt from IP address 192.168.1.100
2026-04-23 02:45:10	Failed login attempt from IP address 192.168.1.100
2026-04-23 02:50:00	Successful login from IP address 192.168.1.100 (user account 'admin')

Conclusion:

The analysis of the 'auth_log.txt' file indicates potential unauthorized system access. The failed login attempts from IP address 192.168.1.100 and the subsequent successful login from the same IP address suggest a possible security breach. The risk level is moderate to high.

Recommendations:

1. ****Review User Accounts:**** Review all user accounts, especially those with administrative privileges, to ensure that they are legitimate and not compromised.
2. ****Monitor System Logs:**** Continuously monitor system logs for any suspicious activity, including failed login attempts and unauthorized access.
3. ****Implement Additional Security Measures:**** Implement additional security measures, such as multi-factor authentication and IP blocking, to prevent unauthorized access.
4. ****Conduct a Thorough Investigation:**** Conduct a thorough investigation to determine the extent of the security breach and identify the perpetrator.
